                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sero
밁
                                     Qy
```

```
C; Function: attacks cell membranes and causes coll specific time.

A; Description: attacks cell membranes and causes collision as hemolysin A homology
C; Superfamily: hemolysin A; hemolysis; exotoxin; hemolysis; lipor; Keywords: calcium binding; cytolysis; exotoxin; hemolysis; lipor; 240-786/Domain: hemolysin A homology <HIYA>
F; 240-786/Domain: 9-residue repeats (G-G-X-G-[DN]-D-X-[LVIYF]-X)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A;Status: preliminary

A; Molecule type: DNA
A; Residues: 604-685 <TAS>
A; Residues: 604-685 <TAS>
C; Comment: This organism causes porcine pleuropneumonia.
C; Genetics:
A; Genetics:
C; Superfunction: attacks blood cell membranes and causes cell lysis
C; Superfamily: hemolysin A; hemolysin A homology
C; Keywords: calcium binding; cytolysis; exotoxin; hemolysis; lipo;
F; 721-847/Region: 9-residue repeats (G-G-X-G-[DN]-D-X-[LVIYF]-X)
F; 7560,686/Binding site: palmitate (Lys) (covalent) #status predict
